

Curriculum vitae – Andreas Wieser

“How can spirit, soul and awareness influence our health to achieve the best possible outcome?” 27 years ago, Andreas Wieser put this central question at the heart of his efforts.

The visionary, founder, former partner and manager of the Lanserhof is working tirelessly at combining tried and tested methods with innovative diagnostics and therapies for regeneration, awareness and prevention. He has created a unique, ultra-modern medical concept for regeneration and solid prevention.

This new holistic approach goes hand in hand with an early understanding of personalised medicine, helping us to gain new insights into ourselves, achieve solid prevention and integral regeneration. Attractive packages such as “Energy Health”, “Vital Living”, “Health & Healing”, “Ebb & Flow” and many more highly sophisticated programs reflect this innovative way of thinking.

Prof. Andreas Wieser is leading the Lanserhof Group towards a new future: For the first time ever, the successful Lans-Med-Concept will be extended to include new destinations at the Tegernsee lake (2013) as well as in Hamburg (2012).

Prof. Andreas Wieser is the president of the new “Lans Institute for future health”. The international think tank for “Health & Healing” works in strategic and product development, monitoring and coaching.

In addition, Prof. Andreas Wieser is also dedicated to his personal scientific program. “The Science of good Life®” is a completely new strategic approach to global developments in the core competences of health, awareness, medicine and social evolution.
